

FD-100 Folded Dipole HF Antenna

Commercial Series, 2-30Mhz Broadband Design

Product Information

The Bushcomm FD-100 is a High Power compact, two wire folded dipole alternative to our best-selling model, the BBA-100 three wire broad-band antenna.

The FD-100 Folded Dipole covers the frequency range of 2-30Mhz, and has a rated power input of 130W PEP. Best of all, as with the majority of our antennas, **no tuner is required.**

The Folded Dipole is a multi-wire that is relatively light in weight. By having only two stainless steel wires compared to the BBA-100's three wires, it also has less wind loading and an SWR of better than 2.5 (typically 1.5-1.6).

Built to withstand the rigours of the world's harshest environments.

SPECIAL FEATURES

- NO TUNER REQUIRED
- UV RESISTANT SPACER RODS
- UV RESISTANT BALUN/LOAD BOXES
- STAINLESS STEEL WIRE & FITTINGS
